-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(e). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bender et al. (US 6,181,426).

Bender et al teaches an apparatus and method for measuring decay in light intensity by electromagnetic radiation passing through a radiation-absorbing sample by absorption of radiation by the sample by deriving a value of the decay from measurements of intensity produced as a number on different positions along a predetermined path, with the light reflecting back and forth between reflectors spaced apart from each other. In column 5, lines 49-62 in particular, there is a discussion of having the detectors detect the light simultaneously. This requires an arrangement in which some of the light passes to each detector and some is reflected to on to the next detector; such an arrangement will be a "partially reflective means" in that it will reflect part, but not all, of the light at the position of each detector (except possibly the last).

Bender et al at least suggests deriving the decay value from all of the detected values (see the discussion relative to figure 2, column 4, line 37 through

column 5, line 4). Those in the art could choose appropriate light sources, filters, pathlengths, etc. as appropriate for the application at hand.
